Camera model

Stereo vision

Photogrammetry

Camera model

Stereo vision

Photogrammetry

Pinhole camera model

Camera pose

Extrinsics: rotation R and translation T .

$$\begin{pmatrix} u \\ v \\ w \end{pmatrix} = R \begin{pmatrix} x \\ y \\ z \end{pmatrix} + T$$

Fundamental matrix

$$j = f_x \frac{u}{w} + c_x, i = f_y \frac{v}{w} + c_y$$

$$\begin{pmatrix} j \\ i \\ 1 \end{pmatrix} = F \begin{pmatrix} u/w \\ v/w \\ 1 \end{pmatrix}$$

where

$$F = \begin{pmatrix} f_x & 0 & c_x \\ 0 & f_y & c_y \\ 0 & 0 & 1 \end{pmatrix}$$

Pinhole camera model

$$\text{Extrinsics: } \begin{pmatrix} u \\ v \\ w \end{pmatrix} = R \begin{pmatrix} x \\ y \\ z \end{pmatrix} + T$$

$$\text{Intrinsics: } \begin{pmatrix} u \\ v \\ w \end{pmatrix}$$

Camera distortion

OpenCV model

$$r = \sqrt{x^2 + y^2}$$

$$x_{\text{corrected}} = x(1 + k_1 r^2 + k_2 r^4 + k_3 r^6)$$

$$y_{\text{corrected}} = y(1 + k_1 r^2 + k_2 r^4 + k_3 r^6)$$

Simplified radial: $k_2 = k_3 = 0$.

Summary

Camera parameters

5 to 7 parameters: $f_x, f_y, c_x, c_y, k_1, (k_2, k_3)$.

Pose parameters

9 parameters: 6 for R , 3 for T .

Camera model

Stereo vision

Photogrammetry

Basic principle

Basic principle

Basic principle

Disparity map

Goal

Compute d at every point in the image.
